Picea Canadensis (Black Hill Spruce)

Somewhat similar and closely related to White Spruce, but much more symmetrical, compact and bushy. Hardiest of all Spruces. A native of the Black Hills of South Dakota and first introduced into commercial culture by Mr. D. Hill many years ago, since which time it has been fully tested in all parts of the country and found satisfactory. Foliage varies from green to bluish tint. Found entirely satisfactory north of St. Louis and Philadelphia.

4-6 inch 3 yr. From Seedling Beds 5.00 35.00 30.00 ——

Picea Pungens (Colorado Blue Spruce)

This tree is a native of the Rocky Mountains. It is very hardy and well suited for positions which are too damp for the common spruce. Owing to the beauty of its foliage it is highly ornamental as a park tree. This handsome Spruce was discovered on Pikes Peak, by Dr. Parry in 1862.

4-6 inch 3 yr. From Seedling Beds 5.25 37.50 30.00 ——

Pinus Austriaca (Austrian Pine)

Is sometimes called Black Pine. Has rich, glossy, dark green foliage. Well adapted for planting in cities, as it is highly resistant to smoke. Its native home is in the lower provinces of Austria and also the Northern half of the Balkan Peninsula. A fast growing, dense tree of wonderful adaptability. For years we have secured our seeds from original sources in Austria, but since the war are now using carefully selected home grown seed which has proven as satisfactorily if moved late in the Fall or early Spring.
